

# Ikimon Coloring ~ Fruit Flies ~

The main illustration shows four jars containing fruit flies. The flies are drawn in a simple, line-art style suitable for coloring. The flies in the jars exhibit various phenotypes: some have normal wings and antennae, some have curly wings, some have reduced wings, some have missing antennae, and some are missing their eyes. The jars are arranged in a row, with the central jar being slightly larger than the others.
